KioskXpress

Software that enables registration, payment collection and badge printing from a kiosk, tablet, or laptop.

It's the age-old question: how do you move your members through event registration efficiently, without an army of volunteers or temporary personnel?

enSYNC's KioskXpress enables you to check in more people in less time, while providing a self-service option to members. Your attendees can check in for an event using self-service kiosks, pay for additional classes or optional events and print their own badges on the spot. Even walk-in attendees can register, pay and be on their way in no time. It's as intuitive and easy-to-use as an ATM. All of your kiosk registrations are managed in a separate iMIS batch per kiosk for simplified reconciliation, so bookkeeping is easier, too.

We recently added an enhancement to the product that enables you to take a photograph of your member at the kiosk, and add this image to the badge and the member profile.

Although this module works as a standalone, many customers purchase KioskXpress in conjunction with enSYNC's Barcode Emailer and Barcoded Badge Manager for a total event solution.

System Requirements

- NET Framework 4.5
- iMIS 15.2.15 or Greater
- IIS 7
- SQL Server
- SMTP Service to Send Emails
- SSL Certificate (for https)

Features

- Using a configurable search screen, attendees can search for an existing record. QR or PDF417 barcode scanning is also available for quick badge print and check-in.

- User can be brought to configurable profile page for updating. If the user does not exist the profile page collects user information and creates a new record.

- User is then directed to the events page where events can be made optional, mandatory, limited to a certain number of functions, etc.

- Payment options include credit card, credit card swipe, purchase order, check and cash. Payment options can be enabled or disabled as needed.

- Badge layout and design is easy to configure for your specific needs and can include QR or PDF417 barcodes, attendee photo (taken at the kiosk), an invoice receipt ,as well as tickets.

- Purchase process also generates email confirmation.

- Responsive design allows software to automatically configure display page for different devices .
